Variables in JS

Variables are containers for data

Apna College

Variable Rules

- Variable names are case sensitive; “a” & “A” is different.
- Only letters, digits, underscore(_) and $ is allowed. (not even space)
- Only a letter, underscore(_) or $ should be 1st character.
- Reserved words cannot be variable names.

Apna College

let, const & var

var : Variable can be re-declared & updated. A global scope variable.
